

# COMPUTER SHIELDING

## HARAPAD™ Heat & Radiation Attenuating Pad

Laptops emit a high magnetic field from the base and annoying heat. HARAPad is designed to act as a shield between magnetic field radiation source and the part of your body below the shield. A layer of high-tech radiation shielding material incorporated into the pad contains the field and reduces heat by increasing dissipation to the environment and away from your body and the laptop. Just place the HARAPad under the laptop. Durable, rigid polymer surface acts as a stable platform and fits both 15.4" and 17" laptops.

Amazing high level of performance: *HARAPad reduced magnetic fields more than 100%!* (this means that the magnetic fields were less than background levels with the shield in place) Attractive two tone: black on one side, gray on the other. Easy to transport with laptop. 14.5 x 11 inches. Weighs only 28 ounces. Made in USA.

**HARAPad (Cat. #Q257) ..... \$74.95**

HARAPad Magnetic Shielding Performance

## HARAPad RF With Added RF Shield Covering

HARAPad alone is great for magnetic shielding under your laptop or tablet. But if you want to shield the radiofrequency signal from the computer's wifi, HARAPad with RF shielding is the way to go. A black shielding fabric laminated onto one surface of the traditional HARAPad offers an impressive 40 dB attenuation *in addition to the magnetic shielding*, and provides a nice non-skid surface. Comes ready to use. Don't use a portable device on your lap without it! **(Cat. #Q257-RF) ..... \$99.95**

## iPad POUCH Perfect for iPads, Tablets, and Small Notebook Computers

Check your iPad with an RF meter and notice 2 things:

- 1- while it's on, the RF radiation emission is very strong
- 2- while it's off, it still radiates microwaves!

The iPad Pouch is a shielded pouch with 2 pockets: one which is shielded on both sides, and one which is shielded on only one side. You can use it in several ways to accomplish different things:

Put your device inside the pouch which is shielded on both sides. Radiation emitted will be reduced almost to zero. This is best for when you are not working on the device but you must keep it in the same room with you. Or, put your device inside the pouch which is shielded on one side only.

This allows the signal to still communicate with your router, but shields your body on the shielded side of the pouch. This position also protects the tablet from bumps and scratches as you carry it around.

Finally, while working you can put your tablet on the outside of the iPad Pouch, as shown in the image, to shield radiation to your lap, belly, or legs underneath the pouch.

Simple fold-over top with Velcro closure. Compartment measures 11.4x7.8 inch, durable black leather-like finish.

**iPad Pouch (Cat. #Q211) ..... \$49.95**
