

COMPUTER SHIELDING

COMPUTER MOUSE, ball type

Retro Design, Ultra Low Emissions

We looked high and low for a low EMF emission PS2 computer mouse. We finally located a limited supply of these brand new, but older model ball mice. Testing with a Trifield meter revealed no measurable emissions on magnetic or electric field settings!

Example

Old style ball for detection of movement, so no high emission optical electronics. Will plug and play on many computers (not Apple). Style and color may differ from image. Get the USB adapter if your computer does not have a PS2 (round) port available.

- Computer Mouse (Cat. #Q310) \$9.95**
PS2 to USB Adapter (Cat. #Q309) \$4.95

REMOTE KEYBOARD

Reduce Computer Exposure Thru Increased Distance

With 107 keys, this black USB keyboard is great for home or office use. The USB interface allows plug-and-play compatibility with any computer with a USB port. Nice feel to the keys. Full 18 x 6 inch size.

*Laptops are especially difficult to shield without adding a lot of bulk. Dramatically reduce EMF exposure to your laptop or PC by simply increasing the distance. Best of all: **54 inch** long cable connects easily through the USB port. Does not have mouse pad. A separate mouse or keyboard shortcuts can be used.*

Magnetic Field Reduction for a Typical Laptop				
mG readings		Off	AC Power	Battery Power
Hands	w/o remote	0	3.0	5.0
	with remote	0	0.2	0.1
	% reduction	0	93%	98%
Chest	w/o remote	0	0.4	5.2
	with remote	0	0	0.1
	% reduction	0	99+%	98%
Face	w/o remote	0	0.4	5.1
	with remote	0	0	0.1
	% reduction	0	99+%	98%

- Remote Keyboard (Cat. #Q248) \$9.95**

MINI USB KEYBOARD

"Greater Portability"

By increasing your distance from the laptop, you greatly reduce your EMF and RF exposure. This 11x5½x½ inch keyboard means your don't have to sacrifice portability. Designed to maximize productivity while minimizing space this keyboard is perfect for Windows laptops on the go. Features 3 visual feedback LED's for Caps Lock, Num Lock and Scroll Lock. Also has 89-key design, quiet-type key technology, metal base, and 48 inch USB connector cable. **Mini USB Keyboard (Cat. #Q248-mini) \$18.95**

USB GROUND CORD

Add Grounding to Your Laptop

Most laptops are not grounded, even when working off plug-in power. Ungrounded electronics may emit high electric fields or raise Body Voltage. Adding grounding could be the answer. This 6 foot ground cord plugs right into the USB port and makes contact with the laptop's chassis. The other end plugs into a grounded wall outlet (North American plug style). Simple and effective, as recommended by Michael Neuert.

Caution: Use an outlet tester to check your outlet for proper grounding *before* connection a laptop to ground. Don't blame us if your outlet is not properly grounded!

- USB ground cord (Cat. #Q295-USB) \$8.95**
