

COMPUTER SHIELDING

SHIELDED NETWORK CABLE

Cat7 Shielded Ethernet Stranded Copper Patch Cord

Cat 7 cable is like Cat 5 and Cat 6, only faster. And this Cat 7 cable is shielded, both to keep interference out of the cable, and to block electric field and RF emissions from the cable. Simply plug it in for worry-free internet connection between your computer and the modem/router. Cable connection is both faster than wireless and more secure. Now, just turn off the wireless at the modem and at the computer for a radiation free internet connection! 26AWG, 600MHz SSTP(PIMF) Select your desired length. Colors may vary. **Shielded Network Cable:**

10 ft (Cat. #R703-10) \$10.00
25 ft (Cat. #R703-25) .. \$20.00

50 ft (Cat. #R703-50)..... \$35.00
100 ft (Cat. #R703-100) . \$50.00

NETWORK CABLE GROUND

For Use with Shielded Cat7 Cable

We have found that some routers inject either an electric field or a radiofrequency signal into the shielding sheath of Cat7 cable, which then radiates into the room. This simple ground system shunts those fields to ground eliminating the unwanted broadcast from the cable and may even improve transmission quality. Easy to install, no tools required. Simply add the conductive tab to the Cat7 cable

plug, then clip-on the ground cord. Can also be used to ground an existing USB cable.
Network Cable Ground (Cat. #R704) \$8.95

USB GROUND CORD

Add Grounding to Your Laptop

Most laptops are not grounded, even when working off plug-in power. Ungrounded electronics may emit high electric fields or raise Body Voltage. Adding grounding could be the answer. This 6 foot ground cord plugs right into the USB port and makes contact with the laptop's chassis. The other end plugs into a grounded wall outlet (North American plug style). Simple and effective, as recommended by Michael Neuert.

Caution: Use an outlet tester to check your outlet for proper grounding before connection a laptop to ground. Don't blame us if your outlet is not properly grounded!
USB ground cord (Cat. #R295-USB) \$8.95

COMPUTER MOUSE, ball type

Retro Design, Ultra Low Emissions

We looked high and low for a low EMF emission PS2 computer mouse. We finally located a limited supply of these brand new, but older model ball mice. Testing with a Trifield meter revealed no measurable emissions on magnetic or electric field settings! Old style ball for detection of movement, so no high emission optical electronics. Will plug and play on many computers (not Apple). Style and color may differ from image. Get the USB adapter if your computer does not have a PS2 (round) port available.

Computer Mouse (Cat. #R310) \$9.95

PS2 to USB Mouse Adapter (Cat. #R309) \$4.95

Enables mouse above to plug into USB port
