

SMART METER SHIELDING

SMART METER SHIELD KIT

Everything You Need for Effective RF Shielding

We get this question a lot: "How do I shield my smart meter?" Remember, you want the shield to be placed between the source of radiation and the people you wish to protect. And it would be nice if the shield didn't reflect radiation back towards the people. In this kit, you get everything you'll need to set up a simple but effective shield for the brain jarring beat of the smart meter. It covers an ample area of **8x7 feet** and includes an RF reflector, an absorber material, mounting tape and ground cord. With these 2 layers, almost no radiation can get through and this is easily demonstrated with the proper RF meter. Clear instructions show you how to attach it to the interior of the wall on which the smart meter is mounted. You can cover it with any decorative finish you like. Great for both long term or short term (removable) situations. Your smart meter is pulsing out microwaves right now. Shield yours today! Includes Economy Exterior Smart Meter Shield Kit (see below) for outdoor protection too!

Smart Meter Shield Kit (Cat. #R1219) \$349.95

Need to cover a larger area? You can order additional material:

Nickel/Copper RipStop (Cat. #R1213) \$12.95 per lin ft (see fabrics for details)

MW Absorbing Sheet (Cat. #R259) \$9.95 per lin ft

ECONOMY EXTERIOR SMART METER SHIELD KIT

Installs In Seconds, Fits All Smart Meters

Smart Meters emit microwave signals in all directions. To protect your loved ones from these emissions, your shield must be placed between the source of emissions and the people. That usually means on the interior of the wall where the smart meter is attached. But what if you need to shield an outdoor patio? Or an area to the side of the smart meter?

Now you can. The Economy Exterior Smart Meter Shield Kit includes everything you need and requires no tools (except a scissors) to install. Installation takes only seconds. Corrosion-immune, soft Stainless Steel Mesh is wrapped around the glass part of the smart meter and is held in place by weather resistant, adhesive Velcro®-type hook and loop. Simply trim any excess with your scissors. Couldn't be easier! Shielding performance reduces sideways signal measurably, but still allows enough to get back to the utility for proper meter readings.

You might even want to get one to offer to your neighbors.

Economy Exterior Smart Meter Shield Kit (Cat. #R208) \$19.95
