

EARTHING

ANTISTATIC GROUNDING MAT

Now With Washable Ex-Static™ Cover

You can ground a useful (12" x 12") area with this professional quality heavy duty static control mat. Use it with static sensitive computer equipment or as a surface for handling static sensitive semi-conductors. Put it under your keyboard or laptop.

More importantly, you can simply touch the mat with any part of your body to dissipate electric field build-up and equalize your potential with ground and reduce static discharge problems. Put it on your seat or on your desktop to reduce ESD. Can be trimmed with scissors to fit any area. Includes removable and washable Ex-Static™ fabric cover, and 5 foot grounding cord (no resistor, terminates with an alligator clip). Surface resistivity is only 10⁵ Ohm/sq. Tough black rubber, about 1/16" thick, for years of trouble free service. **(Cat. #Q212) \$39.95**

ANTI-STATIC MINI PAD

Small Price, Big Performance

Static Electricity accumulates as you walk and move about. Once you build enough static charge your body can get a shock when you touch another conductive object. After this discharge, your body begins the static building process again as you continue to move about. The discharge is not only painful to you but it can also be destructive to the object you touch... like a phone, computer or any electronic component.

To eliminate the pain and save your electronic equipment place Anti-Static Mini Pads at strategic locations (your desk, computer, fax, file cabinet). Touch them often. Touch it with your hand, toe, nose or any part of your body. No pain, no damage, as you are now at zero static. 4x6 inches. 10⁹ Ohm/sq. Includes 10 foot cord with 1 MOhm resistor which snaps on, and terminates with an "O" ring. **(Cat. #Q350) \$10.95**

VELCRO® ANTI-STATIC WRIST STRAP

- comfortable 2 cm wide, black nylon Velcro strap
- interior surface is coated with conductive carbon
- completely adjustable
- coil cord with 1 MOhm resistor, connects to strap with snap, stretches to 60"
- cord terminates with banana plug or alligator clip (included)

(Cat. #Q469) \$3.95

HEEL GROUND

Make any Shoe into a Grounding Device

Perhaps the easiest way to stay grounded when you are on the go. Conductive rubber material is black on one side, gray on the other, discharges you to whatever surface you are standing on. Non-marking on most surfaces. Slip over the heel and wrap the adjustable Velcro™ strap around the front of your ankle to hold it in place. Conductive tag can go inside the shoe or into the top of your sock to make contact with your skin. Includes 1 MegOhm resistor. Static dissipation to zero volts is accomplished in less than 0.1 seconds on any conductive surface. Perfect for static discharge and ESD applications. **(Cat. #Q242) \$5.95**

VEHICLE GROUND STRAP

Vehicle Connection to Ground

Like a Grounding Wrist Strap for your car! No one likes that awful shock when get-ting out of a car or truck. That shock is the discharge of "chassis voltage" built up as the vehicle moves along the highway. Every year, this seemingly innocent spark occurs at the wrong place and the wrong time: igniting gasoline vapors while fueling the vehicle. The Vehicle Ground Strap can be used on any car or truck. Simply affix the strap's clamp to the chassis of the vehicle and allow the conductive strap to dangle to the ground. Safe, durable and unaffected by the weather. Great gift too. 18" long, 1 yr wty. **(Cat. #Q214) \$19.95**
