

MORE UNIQUE METERS

AIR ION COUNTER *Unique in this Price Range*

This hand-held ion counter possesses the same sensitivity (down to 10 ions/cm³) as meters costing far more. Electrostatically shielded, with a fan throughput of 200 cm³/sec, it can make accurate readings even in adverse conditions. Measures positive and negative ions separately. Use it to measure the ions generated from electrical storms, water spray, radioactive minerals & radon,

corona discharge from high tension wires, even check the effectiveness of your ion generator! Made in USA with a 1 year warranty. 9 volt battery included.

Setting Time: 10 sec
 Noise level: 10 ions/cm³
 Accuracy: ±25% for fast ions
 Ion selectivity (crosstalk): 20x
 Range: 10 - 1,999,000 ions/cm³

(Cat. #R156)..... \$499.95

Extended range version available with range of 100 - 19,990,000 ions/cm³ for high ion concentration measurements. Same price, same great features.

Air Ion Counter 20M (Cat. #Q156-20M) \$499.95

REMOTE CIRCUIT CUT-OFF SWITCH

Shut Any Circuits in the House with the Touch of a Button

On average we spend approximately 1/3 of our life in the bedroom. The typical bedroom has bedside lamps, clock radios, electric blankets, VCR's, televisions etc... Most bedrooms are surrounded by a curtain of electric and magnetic fields caused by the mere presence of live wiring, even when everything in the bedroom itself is switched off.

What's more, wiring for downstairs lighting, upstairs receptacles, lighting and fans commonly run through the ceilings, walls and floors of our bedrooms. This wiring constantly radiates electric fields, even when everything is switched off. But why expose yourself all night long when you are not even using power? This Remote Circuit Cut-Off Switch shuts the electricity at THE FUSE BOX. No power to the wires means **no electric fields** and **no magnetic fields**. This is a simple yet 100% effective method of eliminating electric fields emitted from any circuits you want. The simple push of a button on the included remote restores power to this circuit for normal operation. Naturally, circuits supplying other rooms in the house can be controlled as well. Why have all the power on in the kitchen, family room, or study... even when you don't need it? You can connect up to 4 separate circuits up to this unit, and all will go on and off with the press of one button. So much easier than running to the breaker box! In addition, you can add up to 3 additional Contactors (with up to 4 circuits each), each of which can be controlled independently. So, whether you want to control power to one room, or the whole floor, or any combination of circuits, the choice is yours! The main unit installs near your circuit breaker box. Two remote controls are included which can be used anywhere in the house. *It cannot control 3 phase (240V) circuits like the ones for your electric stove and dryer. Give your body time to grow and repair itself during sleep.*

- Installation must be done by a licensed electrician according to the electrical code for each State / Province (USA / Canada). North American style only.

Operating Voltage: 120V AC
 Continuous Load: 24 Amp, x4 Single Circuits
 Mounting: Separate electrical box beside the breaker panel (not included)
 Warranty: 2 year manufacturer's warranty

Remote Circuit Shut-Off Switch (Cat. #R487) \$339.00
Extra 4 Circuit Contactor (Cat. #R488) \$140.00
