

MORE UNIQUE METERS

AM/FM PORTABLE RADIO

Great for Detecting Magnetic Fields and Dirty Electricity

Pocket-sized versatility and low cost meet to offer an old fashioned radio that offers AM/FW and 7 band shortwave stations, plus listen to Analog TV Sound Ch 2-5.

That's all fine, but for our purposes, dial to a "quiet" section of the AM band and use this detector to "sniff" for sources of AC magnetic fields and dirty electricity. The sound of loud static hissing and crackling is unmistakable. The pitch of the sound corresponds to the frequency of the fields present, and the loudness corresponds to the strength. Check around dimmer switches, outlets, appliances, lighting and computers. Also has a 3.5 mm mono earphone jack and telescoping antenna. Operates on 3V DC or 2 AA batteries (not included). These are not easy to find!

AM/FM Portable Radio (Cat. #Q124) \$14.95

GRIMELIGHT™ *Unique UV Flashlight* *The Housekeeper's Helper*

Shine the light on dirt and grime. Achieve a new standard of clean!

Grime Light™ causes unseen proteins and minerals to fluoresce, making them highly visible. Hidden breeding grounds for germs can be revealed for efficient treatment and thorough removal. Detects organic and mineral deposits that remain on carpet, skin, clothing, glassware, tools, and surfaces that routine cleaning and sanitizing can miss.

Ultraviolet light also reveals the security strips in monetary currency, watermarks hidden in bank notes and fluorescent ink and dyes used as anti-counterfeiting. Illuminate scorpions, check hand stamps at clubs, discover pet stain in carpet or upholstery, and scan a crime scene for foreign materials and body fluids. Handy when checking a hotel room for cleanliness! Solid aluminum body. 51 Long-life LEDs emit 390-395nm.

Some paranormal investigators use UV to help detect airborne particles and distinguish them from orb phenomena. Some even theorize that one can use UV light to "push" or "herd" spirits to/from a location to aid research photography, EVP, and contact. Operates on 3AA batteries (not included).

GrimeLight™ UV Flashlight (Cat. #Q461) \$29.95

REMOTE CONTROL TESTER

Tests any Infra-red Remote Control Device

Remote control not working? Maybe it's the batteries, maybe the remote is shot, or maybe it's the TV/VCR/Stereo/AC or other controlled device! This Remote Control tester will confirm the operation on any IR remote control. Simply plug the tester into an AC outlet (100V~220V) and point your remote control at the tester. A red LED will light up and sound will be heard when an IR (infrared) signal is detected

Compact and light construction makes it very portable. A great addition to the tool box of any technician who works with IR or fiber optic systems using infrared. Has standard European 2-pin plug *plus* a North American adapter so it can be used in either location.

Remote Control Tester (Cat. #Q445) \$12.95
