

LOW EMF DEVICES

EXTENSION CORD, SHIELDED

Shielded for Both Electric and Magnetic Fields

These are no ordinary extension cords. The North American style extension cords are made with 100% MuCord™ for superior electric and magnetic shielding.

Field emission is dramatically reduced compared to ordinary extension cords. Use them with your computer equipment, lighting, small appliances, power tools, and so on. Great way to move Stetzer (Dirty Electricity) filters away from where the people are. You can link several together to get a longer length. If you have power cords anywhere near your bed, workstation, couch or other main living area, run this extension cord instead... to reduce EMF to nearly zero! Indoor use only. Plug and socket color/style may vary. Up to 8 Amp, 300V. NEMA 5-15 plug and socket (3-prong, grounded).

6 foot long (Cat. #R738) ... \$33.40

12 foot long (Cat. #R739) ... \$42.90

POWER CORD, SHIELDED

Shielded for Both Electric and Magnetic Fields

Replace the power cord on your lamps, hair dryer, small appliances, power tools and more with these MuCord™ power cords to reduce electric and magnetic fields from the cord to nearly zero. Standard 3-prong (North American Style) plug is included. Patented wiring configuration inside the cable causes cancellation of the fields. Use whenever the power cord travels near a person's body. Very unique!

NEMA 5-15 plug (3-prong, grounded), Up to 8 Amp, 300V

(Requires knowledge of how to properly wire the free end to your electric device.)

6 ft long (Cat. #R736-6) ... \$26.45

12 ft long (Cat. #R736-12) ... \$36.95

4-OUTLET POWER STRIP WITH SWITCH

Easy Way to Switch Off Power Completely

It's no secret that every appliance with an illuminated LED (stereo, TV, oven, dishwasher, router, etc.) is never really OFF. If the 24/7 draw of "vampire power" adding to your utility bill isn't enough of a bother, those appliances are also producing (sometimes very high levels of) EMF emissions. You can pull the plug to solve this problem, but that isn't convenient, and it puts a lot of wear and tear on both the plug and outlet.

This power strip converts a standard grounded outlet receptacle into 4 grounded outlets and features a lighted on/off switch with built-in circuit breaker to protect against overloads. Flip the switch and the power to all those things which are plugged in goes completely dead. No EMF, period. Add a timer if you want it to come on and off automatically. It's also a great way to make room for Stetzer Filters. Saves money on power usage too!

- Electrical Rating: 15A / 125V / 1875W; UL/CSA Certified
- 4 Outlets, oriented cross-wise; 3 foot cord; N. American plug style only

4-Outlet Power Strip with Switch (Cat. #R314) ... \$6.99

OUTLET SHUT-OFF SWITCH *Plug-In Switch*

Handy device for turn off the power at the outlet. Stop running to the basement to flip the breakers! It's easy: simply plug this switch into your outlet. Plug your lights, laptop, TV, chargers, or other small appliance into the switch. Now, when you flip the switch, your appliance is truly OFF. No residual electric or magnetic fields, and no phantom power usage. Provides ON/OFF switching at outlet location. 2 wire, residential use. 13 Amp, 125 Volt, Non-Grounding, White. (Cat. #R311) \$4.95
